Guía Práctica 4 Precondición más débil en SmallLang

Ejercicio 1. \bigstar Calcular las siguientes expresiones, donde a, b son variables reales, i una variable entera y A es una secuencia de reales.

- a) def(a+1).
- b) def(a/b).
- c) $\operatorname{def}(\sqrt{a/b})$.
- d) def(A[i] + 1).
- e) def(A[i+2]).
- f) $def(0 \le i \le |A|)$.
- g) $\operatorname{def}(0 \le i \le |A| \land_L A[i] \le 0)$.

Respuestas

Supongo que $def(x) \equiv True$, para todas las variables por lo expuesto en la teorica, ya que de este modo se simplifica la notación.

- a) $def(a+1) \equiv def(a) \wedge def(1) \equiv True \wedge True \equiv True$
- b) $def(a/b) \equiv def(a) \wedge def(b) \wedge b \neq 0 \equiv b \neq 0$.
- c) $\operatorname{def}(\sqrt{a/b}) \equiv b \neq 0 \land (a/b) \geq 0$.
- d) $def(A[i] + 1) \equiv 0 \le i < |A|$
- e) $def(A[i+2]) \equiv 0 \le i+2 < |A|$
- f) $def(0 \le i \le |A|) \equiv True$
- g) $\operatorname{def}(0 \le i \le |A| \land_L A[i] \le 0) \equiv i < |A|$

Ejercicio 2. Calcular las siguientes precondiciones más débiles, donde a, b son variables reales, i una variable entera y A es una secuencia de reales.

- a) $wp(\mathbf{a} := \mathbf{a} + \mathbf{1}, a \ge 0)$.
- b) $wp(\mathbf{a} := \mathbf{a}/\mathbf{b}, a \ge 0)$.
- c) $wp(\mathbf{a} := \mathbf{A}[\mathbf{i}], a \ge 0)$.
- d) $wp(\mathbf{a} := \mathbf{b*b}, a > 0)$.
- e) $wp(\mathbf{b} := \mathbf{b} + \mathbf{1}, a \ge 0)$.

a)

$$wp(\mathbf{a} := \mathbf{a+1}, a \ge 0) \equiv def(a+1) \wedge_L (a \ge 0)_{a+1}^a$$
$$\equiv True \wedge_L a + 1 \ge 0$$
$$\equiv a \ge -1$$

b)

$$\equiv True \wedge_L b*b \ge 0$$
$$\equiv b*b \ge 0$$

e)

 $\equiv True \wedge_L a \ge 0$
